EDUCATION

Carnegie Mellon University, H. John Heinz III College May 2027
Master of Science, Health Care Analytics & Information Technology GPA: 4.0

Lahore University of Management Sciences May 2023
Bachelor of Science, Computer Science GPA: 3.8

COURSEWORK

Machine Learning, Accelerated Statistics, Applied Econometrics, Health Policy, Databases, Distributed Systems, Software Engineering, Health Systems, Responsible AI, Optimization and Decision Analysis

SKILLS

Python, R, SQL, MATLAB, Excel, C++, JavaScript, React, Figma, Power BI, Git, Docker, Microsoft Office Suite

RELEVANT EXPERIENCE

Novartis June 2026 - August 2026
Data Science Intern, Reimbursement Insights and Analytics

- Modeled ordering patterns for radiopharmaceutical treatments with statistical and machine learning methods to identify drivers of inefficient ordering for market access team
- Built a custom AI model to flag unused-dose patterns and avoidable waste for customer support
- Built a site-scoring tool used by customer support to flag hypercare sites and drive proactive outreach

SHAPE Global Ltd. November 2024 – July 2025
Technical Projects Associate

- Led development of specialized health reports (Brain Health, Health Age) with Python and Power BI, used by 1k+ employees across corporate clients
- Applied statistical modeling using Python on datasets exceeding 400k data points to identify key health drivers, uncovering hidden correlations that established baseline metrics for future programs
- Ideated and prototyped an internal AI agent using Retrieval-Augmented Generation, automating 10+ workflows

Lahore University of Management Sciences June 2023 – October 2024
Graduate Research Assistant, AI in Healthcare Initiative (AIHI)

- Appointed the Technical Project Lead for a multilingual AI clinical decision support system
- Supervised a team of 10 students (machine learning, web development, and business development)
- Led product development, and validation integration for pilot deployment in hospital environment (1.5k patients/day)
- Presented technical solutions and engineering outcomes to 10+ investors and venture capital firms, securing $100k in prospective funding for product scaling

ACADEMIC PROJECTS

Sepsis Prediction Engine April 2026

- A clinical decision support prototype for early sepsis detection in ICU settings. Conducted EDA and sensitivity analysis, designed and developed the complete front-end, and documented the process in the final report.

HospiTrack October 2025

- Web app that helps patients in the U.S. Midwest find nearby emergency departments and walk-in clinics with wait times, quality scores, and patient experience metrics. Led the front-end development (Streamlit, Python)

LEADERSHIP EXPERIENCE

CMU The Sustainability Initiative - Community Health and Well-being Intern October 2025 - May 2027
CMU Graduate Peer Health Advocate August 2025 - May 2027
